

## Practix OK-04

### GENERAL

Designed specifically for sublimation heat transfer printing, the OK-04 is a heavy duty stand alone press. With its large heated platens, the machine is able to print large piece goods and rugs. Extremely simple in operation, minimum physical effort, and high productivity are the result of the two reciprocating tray system. With this system, one tray is in the print chamber while the other is available for loading. Premium quality printing is achieved due to a solid state temperature control system and also electronic timer. Optional top and bottom heat offers double sided flag printing

capabilities. A high watt density on the platen allows the heater to heat up faster after pressing.

### SPECIFICATION

- Platen Sizes                    36" x 48"  
    42" x 54"  
    48" x 68"  
    60" x 80"
- Fusing Pressure                12.5 PSI
- Air Line Pressure              100 PSI
- Connected Load                upto 150kW
