

PRACTIX OK-450TB

High Productivity Two Workstation Heavy Duty Embossing/Thermoprinting/Fusing Press

GENERAL

Designed specifically for large format, heat transfer printing. This machine is well suited for transferring images to wood, carpet, polyester, coated metals and many other materials. With top & bottom heat, this machine is capable of printing wood without warping. It will also print both sides of flags and banners in one cycle.

Extremely simple operation, minimum physical effort, and high productivity are the result of air operated head movement and two workstations. There is no need to slide trays back and forth! One working surface is available for loading while the other is pressing.

Consistent quality of work is assured by a precision electronic temperature controllers, adjustable to prevent any difference between or actual platen temperature and the digital display, and a timer, which can control dwell times to 1/10 of a second.

SPECIFICATIONS

- Platen dimensionsper request
- Actual Platen pressureup to 45 psi
- Air line pressure100 psi
- Power requirements240 V, 3 phase
- Connected loadup to 500 Amps
- True solid state heat control
